

Making a **positive** difference

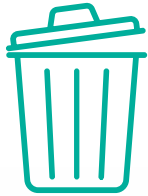

A Partner for Sustainable Development

Our aim: To reduce energy **in** and to **reduce** end of life impact.

Can you help us to make this a reality?

Our current situation and potential areas to work on:

Waste Management

What we do now...

- Internal recycling
- Packaging optimisation

Our aspiration...

- Valorising waste streams
- Packaging reusability

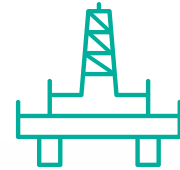

Energy Management

What we do now...

- Energy efficiency internal programmes

Our aspiration...

- Lower temperature processing
- Effective use of reaction energy
- Energy sourcing from renewable sources

Raw Materials

What we do now...

- Renewable feed stocks
- Use of catalysts
- Phasing out toxic chemicals

Our aspiration...

- Hazard-free chemistry
- VOC free
- Cost effectiveness
- More locally sourced products

Scott Bader Products

What we do now...

- Reducing styrene/ VOCs
- Exploring renewable sourcing
- Sustainability scorecards

Our aspiration...

- Spot engineered products
- Easy recovery of raw materials from products
- Open to new markets

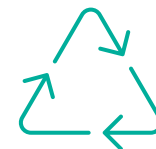

Composite Parts

What we do now...

- Process efficiency support
- Waste reduction
- Safer chemistry

Our aspiration...

- Greater reuse and recyclability
- Extension of part life (ready reparability)

End of Life Management

What we do now...

- Exploring thermal recovery

Our aspiration...

- Design for degradation
- A repurposing of all end of life parts (through a variety of means)
- Maximise value

Do you share our ambition for a more responsible composites industry?
